---

Project Experience

- **Log Logger:**
  - Log Logger is a web application that allows for a user to log their stool based on the Bristol Scale along with their water and food intake. Once the user enters their information into the site, the site will display a graph that shows the correlation between their stool along with their food and water consumption.
  - This web application uses **Handlebars** for the actual webpages, **Sass/CSS** for the styling, **Node.js**, **express**, passport.js for each individual user's usernames and passwords, chart.js for the graph, **React.js**, and **MySQL and sequilize** for all of the data on the back end.
  - Link: https://loglogger.herokuapp.com/
- **Ticket Fiend:**
  - Ticket Fiend is a web application that allows users to find a wide array of tickets to events that are happening in their area of choosing. Once the user enters in all of the information on the front page, the page gives the user several different events that are within the parameters that they entered at the bottom of the page.
  - This web application, in addition to using **HTML** and **Sass/CSS**, uses **jQuery**, the Seat Geek API, and CSS animations.
